Infectious Disease Safety Management Program

This program helps guide your laboratory in forming protective actions and documenting a plan against infectious diseases. Having an expert assist you is the best way to know you have a proper plan in place.

Learn more about this service

Health & Safety Manual Options

Get a Customized Turn-key Safety Manual to assist in meeting OSHA's written documentation requirements and CDC guidelines. Includes the most up-to-date info available to aid in addressing health and safety hazards in the dental lab workplace. Learn more about these options

- **Electronic Customized Health & Safety Manual**—This turn-key solution is customized *specifically* to your dental laboratory's procedures. Includes one hour of consulting to assist in preparing your program.

- **Hardcopy Customized Health & Safety Manual**—Includes all components of the electronic download as described above plus a hardcopy manual. All documents are organized in a heavy-duty binder with color documents separated by tab sections. Includes shipping within the continental U.S. ground service.

- **State Plan Add-on**—All manuals are prepared for the federal OSHA plan; however, due to complexity a state-specific plan for California, Michigan, Minnesota, or Washington is available for an additional fee.

- **UQ System—Secure Cloud-based Safety Program Maintenance**—The most efficient way to maintain your health & safety manual. Easily manage your safety manual online and get automatic regulatory updates to meet applicable federal and state OSHA Right-to-Know requirements. Offers better document organization, increases efficiency, reduces paper, eliminates misplaced paper manuals, links policies, procedures and forms. Learn more.

Health & Safety Training Options—Customized Online Video, Live Onsite, Live Virtual

This customized training will lay the foundation for your staff to recognize the most common safety and health hazards found in the dental laboratory environment including infection control. In preparation, your specific safety procedures and concerns are discussed with SafeLink so that they can be addressed in the training. Learn more about options

Health & Safety Assessment Options—Onsite or Virtual

An assessment is an effective way of determining the lab's risk position regarding worker safety. You'll gain access to a safety expert familiar with the dental lab work environment, CDC guidelines & OSHA requirements. Learn more.

Complete Onsite Visit: Health & Safety Training and Lab Assessment

The most successful route: 1) to train your workers in a manner that ensures knowledge retention and brings positive results; 2) to thoroughly assess your lab in determining your risk position and prevention needs in regard to employee safety; and 3) to train your safety coordinator on their responsibilities for executing and maintaining your lab's safety program. Learn more about this service. Travel expenses may be incurred & restrictions may apply due to pandemic.

Online Courses

Get health & safety training courses specific to the laboratory available online 24/7. Each course provides a single user access available up to two weeks from purchase. Topics include infection control, basic safety training in dental lab environment, drivers training, workplace security, and more. Learn more. Get unlimited access to courses for all your employees, new hires, or for licensing credits with the **Safety Connection**—see below for details.

Safety Connection
