

How Do You Know Your Safety Program Meets OSHA Requirements?

Conducting a thorough assessment is vital to determining your dental lab's risk position and prevention needs in regard to worker health & safety during today's challenges.

Dental Laboratory Safety Assessment

- OSHA Compliance
- CDC Guidelines
- Infection Control

Get access to a safety expert familiar with the dental lab work environment who knows how to properly survey your facility and your safety procedures. This safety check-up is available onsite or virtually and includes review of Infection Control Practices & Procedures, CDC Guidelines, Analysis of Personal Protective Equipment use including respirators, Bloodborne Pathogen Standard, Written Health & Safety Policies, Ergonomics, Fire & Electrical safety, First Aid, Emergency procedures, Chemical safety/HazCom, Equipment/Machine Guarding, Walking & Working Surfaces, Injury & Illness Recordkeeping. This valuable Safety Assessment is followed up with a written audit report.

Why should your lab conduct a Safety Assessment?

- Assists in determining your lab's risk position and prevention needs regarding worker health & safety
- Provides access to a safety expert familiar with a dental lab work environment, CDC guidelines & OSHA requirements
- Keeps your lab on track with meeting OSHA requirements and CDC guidelines
- Shows your team that your business cares about their health & safety
- Provides a detailed written report of prevention needs
- Helps reduce risks, liability & costs
