

Protect Your Workers & Your Business' Liability

Does Your Health & Safety Program Meet OSHA Requirements?

Has It Been Communicated Properly to Your Lab Employees?

Having an expert assist you in conducting a thorough assessment is vital to determining your lab's risk position and prevention needs in regard to worker safety during today's challenges. There's no better time than now to properly train your work family by an expert familiar with COVID-19 infection control and safety in a laboratory work environment. A virtual safety training is a contactless approach for the lab's team to recognize and protect workers from the most common safety & health hazards in their work environment.

Get a Lab Virtual Safety Assessment & Employee Training to Assist in Meeting OSHA Requirements & CDC Guidelines for Infection Control / COVID-19 Infectious Disease Prep

Virtual Safety Assessment for the Laboratory—This interactive safety check-up includes a survey of your facility and your safety procedures conducted by a SafeLink safety expert familiar with the laboratory work environment. The virtual assessment is followed up with a written report of prevention needs. The CDC guidelines are taken into consideration including COVID-19 Infectious Disease Preparedness plus OSHA Compliance including: Infection Control Practices & Procedures, PPE Analysis, Bloodborne Pathogens—Exposure Control, Equipment/Machinery Guarding, Ergonomics, Fire & Electrical Safety, Emergency Procedures, Chemical Safety/Hazard Communication, Walking & Working Surfaces, Injury & Illness Reporting, plus more.

Virtual Health & Safety Training for the Laboratory—This interactive live webinar assists with meeting OSHA's training requirements and CDC guidelines including COVID-19. Training is customized and available for replay up to one year. Includes OSHA-required training documentation & CE credit.
