

## How do you communicate your lab's safety program to employees?

There's no better time than now to properly train your work family by an expert familiar with health and safety in a lab work environment including infection control. A virtual safety training is a contactless approach for the lab's team to recognize and protect workers from the most common safety & health hazards in their work environment.

## Virtual Health & Safety Training for Dental Lab or Ortho Lab Employees

Why should your laboratory choose this virtual training?

- A health & safety expert assists you with OSHA's training requirements & CDC guidelines including infection control
- Customized and delivered contactless in the comfort of client's own environment
- Delivery method options are: 1) a private live webinar setting with a recording available for up to one from live training date or 2) a prerecorded training available online 24/7 for up to one month
- Training is typically half hour to one hour in length and utilizes colorful presentations
- Includes OSHA-required training documentation & CE credit
- Training covers current topics, such as, Bloodborne Pathogens - Exposure control/Infection Control practices, COVID-19 Infectious Disease Preparedness and Response Plan, Personal protective equipment requirements
- Additional topics covered as they apply to the lab include Chemical safety/hazard communication, Emergency planning & procedures, Ergonomics, Electrical issues/lockout-tagout, Equipment safety, Workplace Violence, Injury & Illness reporting, plus more

*"Thank you for such a great safety presentation! The move to a virtual presentation was flawless...kudos to the SafeLink team for a high quality presentation...Best ever! We appreciate your team and thank you for keeping us on track to being a safe work place!"*  
Lisa V., Laboratory Administrator
