

FOR IMMEDIATE RELEASE

SafeLink Consulting Inc. Launches SafeLink360, Bringing Risk & Compliance Management and Expert Support Together in One Platform

Built on more than 30 years of risk & compliance experience, SafeLink360 gives organizations one place to manage their compliance program, with the flexibility to run it in-house or lean on SafeLink's compliance experts.

Gainesville, GA - September 10, 2026 - SafeLink Consulting Inc., a risk and compliance consulting firm serving regulated organizations across dental, medical, and general industry sectors, today announced the launch of SafeLink360, a compliance management platform designed to give organizations a single, structured system for managing regulatory requirements from assessment through resolution.

SafeLink360 was built to close a common gap: software can organize compliance requirements, but it cannot tell an organization what to do when the answer isn't obvious. SafeLink360 pairs the platform with direct access to SafeLink's regulatory and compliance experts, so clients are never working from a library of templates alone.

The platform is built around a continuous cycle — assess, manage, train, monitor, and improve — so compliance stays current rather than becoming a one-time project.

KEY CAPABILITIES

Key capabilities include document and records management, task and accountability tracking, structured assessments, training and workforce readiness, and reporting built for regulatory oversight.

TWO WAYS TO ENGAGE

Organizations can run SafeLink360 on their own, with SafeLink providing tools and support, or ask SafeLink to help manage the program more directly. Either way, SafeLink's regulatory and compliance expertise is built into the platform, not an add-on.

BUILT FOR REGULATED INDUSTRIES

SafeLink360 is purpose-built for organizations navigating overlapping regulatory frameworks, including dental practices and laboratories, medical and wellness providers, and general industry — addressing requirements spanning OSHA, HIPAA, FDA, Infection Prevention, and Environmental Controls.

“Compliance software can help organize requirements, but technology alone doesn’t tell you what to do when the answer isn’t obvious. That’s where SafeLink is different. SafeLink360 combines the technology to manage compliance with the expertise and ongoing support to help clients navigate it—built on decades of real-world compliance experience, not simply a software product.

We also recognize that every organization’s needs are different. That’s why we structure our services, pricing, and terms around where each client is today and how they want to manage compliance, rather than forcing them into a one-size-fits-all model.”

said Matt Rahman, President & Managing Partner of SafeLink Consulting Inc.

SafeLink360 is available now to new and existing SafeLink Consulting clients. Learn more on the [SafeLink360 platform page](#), or [contact SafeLink](#) to schedule a demonstration.
